

## Chapters 18-19 Thermochemistry and Electrochemistry

FRAZZ

BY JEF MALLETT

***AP16.30 C18-C19 MC Test Thermodynamics and Electrochemistry***

Test procedure (no changes from previous procedures):

You will take this test on WebAssign without notes as you would the actual AP test.

You may use your calculator and two pages of scratch paper and a pen to work through the questions.

You may use the paper version of AP Periodic table and Equations sheets and/or the links at the top of each digital question.

There is only one submission for each question, and the exam is curved.

Your scratch paperwork should be carefully organized with the number of each question so that you can find your work should you go back to the problem later. Being organized will prevent careless errors and will help you solve complex problems.

The test delivery is digital, but paper and pen are critical tools that will help you get answers. You should be able to look back at any problem you worked on in your scratch paper and see exactly what you have done.

Materials for the test:

1. A pen
2. Two sheets of scratch paper
3. A scientific or graphing calculator that you plan on using for the AP test
4. AP Equation sheets and Periodic Table
5. A countdown timer set for 90 minutes,

When you have all your test materials and are ready to start the test, start your Countdown timer for 90 minutes and take the test. Submit each question as you complete it. You can continue with the test if you have not answered all the questions in 90 minutes.

Keep your scratch paper for the next assignment, *AP16.40 C18-C19 MC Test Redux*, where you will get a second chance at the problems.
